MISTAKES. These will happen in spite of all care. Write us at once with copy of original order and order number, and mistake will be promptly rectified. Please do not return goods.

OUR RESPONSIBILITY. It is so manifestly impossible for a seller of any perishable goods to be responsible for what happens to them after they leave his hands, especially goods like seeds and plants which are planted in the ground under varying conditions of soil and climate, that we, in common with all American seed houses, disclaim responsibility as to crop which may be raised from the seeds which we sell.

We wish it understood that all goods are sold under the following general non-warranty.

"Oscar H. Will & Company warrants to the extent of the purchase price that seeds, trees, plants and bulbs sold are as described on the container within recognized tolerances. Seller gives no other or further Warranty, expressed or implied."

However, we wish to call the attention of our customers to the fact that we make careful tests of all seeds in our stock and endeavor to see that nothing but goods of the very highest quality are sent out.

We urge most strongly that every bit of seed grain or seed corn received from us be tested. Should the test prove unsatisfactory or the goods not as represented we should be notified at once and an immediate adjustment will be made.

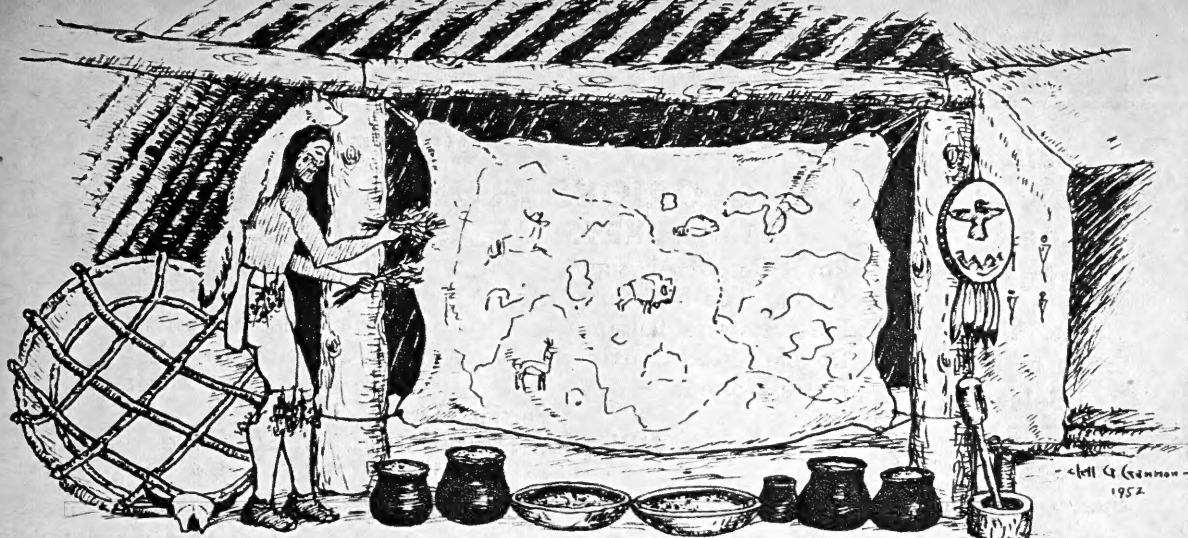

We do not guarantee nursery stock and plants after being taken from the express office, but are always willing to give attention to just claims for loss. We are also glad to enter claim for our customer if they furnish us with a transportation bill showing bad order of shipment on arrival.

Once more we are sending out our annual Catalog—the 70th this time and actually we are in the 72nd year of our business.

We are still in the midst of national and international turmoil and may be brought face to face with difficulties and dangers new and old in an increasing degree during the coming year. Perhaps in these ever more involved difficulties we should first of all turn, like the old Mandan Corn Priest as he blesses the sacred seeds in our little drawing, to the “Great Chief above.” It is, of course, ever more important that those engaged in agricultural pursuits use both their physical and mental powers in planning and producing larger and better crops for the fast growing population of our land. Farm practices of all types are continually improving and crops of newer and better varieties are grown with much reduced man hours of labor. It seems especially essential that the grower pay increased attention to the Seed that he plants, both as to quality and variety. We try to keep up to date on new agricultural practices and to offer the best in Seed suited to the special weather conditions of our Northern Great Plains. With the production achieved this year under the worst drouth conditions since 1936 it seems justifiable to think that improved practices in the handling of soils and new and better adapted Seed have really made crop prospects considerably more certain than ever before even under the worst conditions.

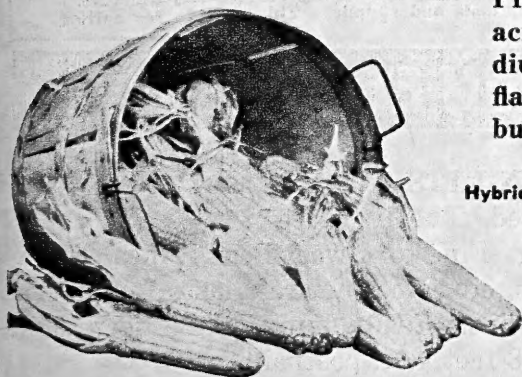

May we wish to all of you a happy and prosperous year. We trust that you will think of us when you think of Trees, Shrubs, Plants and Seeds especially adapted to Northern Plains conditions.

If you are fed up on the kind of Hybrid Corn you have been getting, better try Will's Northern Great Plains bred and grown Hybrids for real Hybrid Results. Try our Hybrid “K,” Hybrid “A” or Nodak No. 301.

A Few Suggestions

The Sweet Pea plant or vine succeeds best in cool, moist, yet well drained soil. To secure the longest possible season of bloom the seed must be planted early. The best mode of planting is the trench method. The trench is dug two feet deep and two feet wide, and filled nearly to the surface of the ground with a mixture of well rotted manure and rich soil, with a six-inch layer of soil at the top. Soaking seed in water over night before planting will hasten germination. The seed should be sown, two inches deep, at the rate of one ounce to twenty feet. During dry weather the ground should be thoroughly soaked once or twice each week. A light spraying of the vines in the evening during hot weather will be found beneficial, and the earth should at all times be kept loose about the plants to a depth of two inches. Sweet Peas should be cut early in the morning and the more closely the flowers are kept cut off the longer will be the period of bloom. Remember, the vines quickly wither, if allowed to produce any great amount of seed. Spray thoroughly and often to prevent infection by aphids.

WILL'S BEANS

Belong in Every Garden

CULTURE: Beans should not be planted until the ground is warm, as cold and wet weather will cause the seed to rot. For garden culture plant four or five seeds in hills one foot apart, and the rows 18 inches apart. For field culture make the rows three or three and one-half feet apart, and cover with two inches mellow soil. Do not hoe or cultivate while the plants are wet with dew or rain, as getting the leaves bespattered with earth causes rust, which injures the crop. One pound of beans is a little more than one pint.

ACP SOIL CONDITIONER, plus plant hormones and essential minerals and elements. Contains the two most effective soil stabilizing elements, (according to unbiased tests made by an eastern university)—PAC (modified polyacrylonitrile) and VAMA (vinyl acetate maleic polymer). Hinders erosion, breaks down hardpan, aids moisture-holding capacity, and helps aerate the soil. Can be used as dust or spray. Not a cureall for work—for best results it must be worked into the soil. This is a soil conditioner—do not mistake for a true plant food. For related products see page 51. Prices F.O.B. Bismarck: $\frac{1}{2}$ lb. can \$1.00; $2\frac{1}{2}$ lb. can \$3.55; 10 lb. can \$10.90.

This selection from Crosby's Egyptian is not as early as the Improved. SWISS CHARD

LUCULLUS. To our mind the best vegetable that can be raised for greens. The crumpled, rich green outside leaves are picked off and the plant yields a constant crop from July well into September. Cabbage

Ask for Prices on Quantities Larger Than Listed

Culture: For early plants sow seed in boxes indoors or in hot bed, allowing 6 to 7 weeks from sowing to setting in the open ground. One ounce of seed will produce from 1500 to 2000 plants in open ground, 3000 in frames. 4 to 6 ounces of seed is required to produce plants for an acre.

PIONEER HYBRID SEED CORN

Sure Production

Mr. Pioneer Hybrid says:

Another year with a short, cool season and early Fall should convince dwellers in the Northern Great Plains that the Southern and Eastern Hybrids which have been so profusely distributed in the area, cannot be relied upon to produce a crop of Corn.

Wills Pioneer Hybrids Are Bred and Grown for Great Plains Conditions

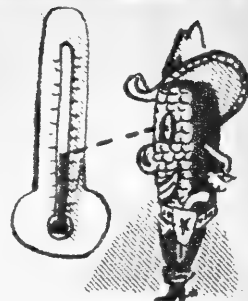

We are the only commercial Seed House in the North that has conducted a long continued project of Corn inbreeding and crossing with special reference to Northern Plains conditions.

One of our Hybrid Fields Near Bismarck

Early and Cold Resistant

And best germinating, Pioneer Hybrids are treated with non-poisonous dust. This increases the seeds' ability to fight off disease and make a good stand.

Wind Resistant

A strong stalk with a massive root system gives added protection against high winds.

High Yields

Will's Pioneer Hybrids' exceptionally high yields bring Repeat Buyers who want to grow these remarkable hybrids year after year.

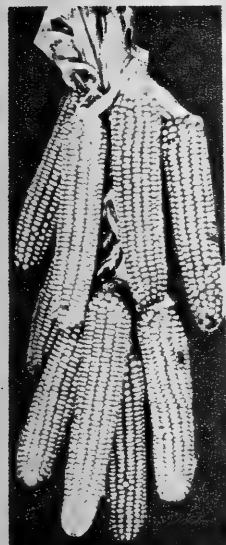

Drought Resistant

Pioneer Hybrids are bred from the hardiest corns grown in the Great Plains area—increasing their drought resistance for your protection.

PIONEER HYBRID "K." 80 days. Falconer and Nodak 301 combination. Heaviest producer of dry ripe corn in our trials of many kinds, this last year. A sure corn to ripen and outstanding in all respects. A handsome yellow dent.

NODAK HYBRID No. 301. 83 days. Somewhat earlier than No. 201 and a little sturdier. We have found it to do somewhat better under our local conditions. A beautiful appearing yellow dent and the hardiest and surest pure yellow dent that we have found in a long list of hybrids.

HYBRID "A." A high yielding early hybrid directly produced from selected strains of Will's Falconer Corn.

Nodak Hybrid No. 301

NATIVE YELLOW FLOUR CORN.

4X FODDER CORN — Southern Grown, Tall, Leafy

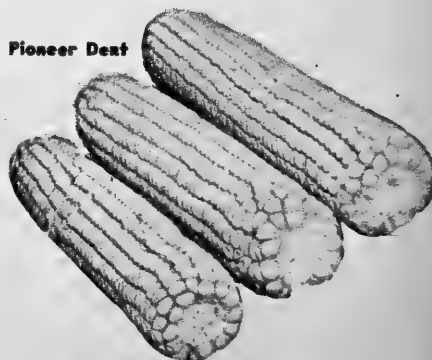

The 4X is, we consider, the very best procurable fodder Corn for Northwestern conditions. We get this grown just far enough south so that **maximum quantity of fodder is produced** and at the same time the stalks come near enough to maturity so that they are **not all water**. The best time to cut Corn for fodder is when the kernels are just past the roasting ear stage. Sow or drill ten pounds to one-half bushel per acre, if planted with a planter; 2½ bu. if broadcast. F.O.B. here; ½ bu., \$3.50; bu., \$6.00.

ACME FODDER CORN. Mixed Dent of Great Plains Types. Almost perfect as a silage corn. This is a mixture of off-type early dents and semi-dents with a previous year's cross. This sort of combination means heavy growth and yield combined with the natural earliness of its components. Easily handled with a binder. Lb., 50c, postpaid. F.O.B. here; 10 lbs., \$1.40; ½ bu., \$3.50; bu., \$6.50.

SWEET FODDER CORN — Wonderful Feed for Milch Cows

Sweet Fodder is coming to occupy a place of very high esteem as a feed for milch cows. Owing to the fact that its **sugar content is so high** it is a more concentrated feed than the ordinary Corn. It is likewise a heavy yielder as it is so bushy, and there are no heavy, coarse stalks which are usually waste. Lb., 30c, postpaid. F.O.B. here; 10 lbs., \$2.00; larger lots @ 17c per lb.

Pioneer Dent

Gehu

FEEDING CORN IN THE NORTHERN PLAINS

Corn is grown for feed. The corn that produces the most in both ears and stalks is the cheapest to feed. It costs money to pick corn—hogs, cattle and sheep pick for nothing. Feeding corn in the field is the most economical way to handle.

For feeding in the field the highest yields always come from flint corn, flour corn and semi-dents.

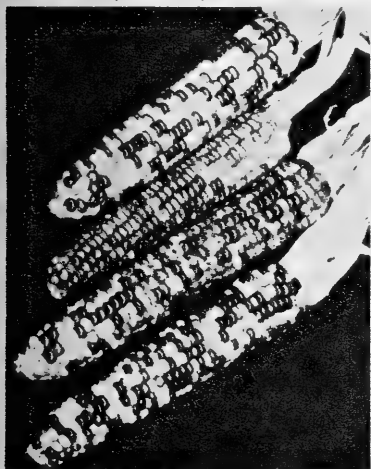

Great Plains

Great Plains Rainbow. Sure maturing, a tremendous yielder and a wonderful corn for the silo or to feed in the field. Developed by John Sarvis at the U.S. Great Plains Experiment Station at Mandan. Will outyield all Dents and Hybrids year in and year out. We have a remarkably fine stock matured in one of our poorest corn years. Lb., 50c, postpaid, F.O.B. Bismarck; 10 lbs., \$2.00; ½ bu., \$3.70; bu., \$7.00.

WILL'S GEHU YELLOW FLINT

Seventy-Five-Day Corn

The best known of our native early flints. We have shipped it to every continent. It has been carefully bred by us for years and shows the effect of this breeding. Its feeding qualities are the highest of any variety of Corn, it is leafy and produces a tremendous amount of excellent fodder, since there is no heavy stalk, and every part of the plant is utilized. It is drought, frost and hail resistant to a wonderful extent in addition to its great earliness. In good soil and under favorable conditions it may be cut with a Corn binder. Gehu is of a lemon-yellow color, ears mostly twelve-rowed. 7 to 10 inches in length. Stalks 4 to 6 feet. Ears 10 to 18 inches from the ground. Lb., 50c, postpaid; F.O.B. here: 10 lbs., \$2.00; ½ bu., \$3.70; bu., \$7.00.

BURLEIGH CO. MIXED or DAKOTA SQUAW CORN

Seventy-Day Corn

Hardy—Early—Heavy Yielding. This is a mixed form of the early flint and is the first variety listed by us after our business was started. It is very resistant to both drought and frost, and fully as heavy a yielder as any variety of early flint. It is of mixed colors, yellow, white, blue and red predominating, ears long and slender, mostly eight-rowed. This Corn shells out heavier than any other variety. Lb., 50c; postpaid; F.O.B. here: 10 lbs., \$2.00; ½ bu., \$3.70; bu., \$7.00.

ASSINIBOINE FLINT CORN

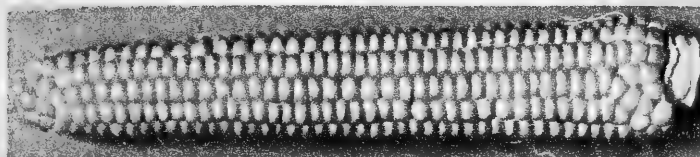

Sixty-Day Corn

Many ears to the hill, and yields of 50 bu. per acre have been reported. Stalks are leafy and bushy, a wonderful variety to feed off in the field. Height from 3½ to 5½ ft. Lb. 50c; postpaid; F.O.B. here: 10 lbs., \$2.25; ½ bu., \$3.85; bu., \$7.50.

FALCONER SEED CORN

**Oscar H. Will & Co. Strain—Highest
Yielding Corn for the Northwest**

Falconer corn is grown by the hundreds of thousands of acres now and many thousands of these acres are off type, unselected or poorly selected scrub corn of the poorest type and certain to make inferior yields.

We introduced Falconer Corn. Falconer in careful tests over most of our state has outyielded every variety including many hybrids.

The answer seems obvious then. Buy genuine Falconer of true, high yielding strain from Oscar H. Will & Co. Lb., 45c, postpaid. F.O.B. here: 10 lbs., \$1.70; ½ bu., \$4.00; bu., \$7.00.

Experiments during the past few years have shown that phosphorus is the most needed element in most prairie soils.

The three necessary elements in plant growth which are not always present in the soil are nitrogen, which stimulates luxurious growth; phosphorus, which has a tendency to force bearing and hasten maturity, and potash which stimulates growth, delays maturity of grains and grasses but hastens maturity in root crops. For gardens, yards, lawns and small intensively cultivated areas the ready prepared fertilizers such as Vigoro are the most economical and convenient to use and the best adapted.

WILL'S PIONEER BRAND GRASS SEED

DIRECTIONS FOR MAKING LAWNS

The seed bed should be spaded or plowed to a depth of 6 or 7 in. All lumps should be broken up, the surface smoothed with rake or plank and well firmed. Sow evenly on a quiet day, rake in well and roll if possible. Use seed at the rate of 1 lb. per 200 square ft. If possible water thoroughly at once.

Good loam soil is best; for the finest lawn black dirt may be spread several inches thick but a good turf of the harder varieties does not require it.

Our Emerald Mixture should be used for the best lawns where water is available.

Red Top is adapted to shady spots.

For a little harder conditions but where some watering is possible, use our Dakota Mixture.

For a good looking dry land lawn, farm yard or large public grounds use Buffalo Grass Stolons or seed, Fairway Crested Wheat Grass or Slender Wheat Grass.

Do not permit the watered lawn to dry out at all until the grass is well up.

Fertilize from year to year as indicated by the condition of the lawn.

We shall be glad to give advice and make up special mixtures for airports, parks, public school grounds, football fields, etc.

WILL'S EMERALD LAWN MIXTURE

Registered U. S. Patent Office.

We include no white clover but can supply it to those desiring it at prices shown.

We include no cheap rye grass in any of our mixtures since it only makes a quick start and then dies out. It is found mostly in cheap mixtures.

WILL'S DAKOTA LAWN MIXTURE

This is a utility mixture for those who do not wish to give the necessary care and attention for the fine lawn and yet want a nice appearing grass plot around the house; also useful for street, boulevards and large public building grounds. Made up of coarser and hardier grasses, it still requires some water. Clover may be used with it to advantage. Postpaid, 1 lb., \$1.00; F. O. SHADE AND ORNAMENTAL TREES

HARBIN SIBERIAN ELM. This is an extremely hardy selection of the Siberian Elm, grown from seed which came from far north in Asia and selected in Manitoba. Prices F.O.B. Bismarck.

CHINESE or SIBERIAN ELM. As a wood lot, shelter belt or grove tree and as a formal or natural hedge this tree has a very definite place in Northwestern planting. Drought resistant and rapid growing beyond almost any other sort. The occasional winter damage explains why we have steadily refused to recommend this tree as a street or lawn tree. In spite of the winter injury, which has occurred only once every 15 or 20 years, we still feel that this very fast growing and drought resistant tree possesses great value in the Great Plains. Even if it has to be cut back to the ground it will recover in a year or so and produce more new growth than could be obtained in the same time by replanting with any other tree. Seedlings, 12 to 18 in. & 18 to 24 in., see page 59. 4 to 6 ft., each, 60c; 10 for \$5.00; 6 to 8 ft., each \$1.00; 10 for \$9.00.
